

Access Rights

Reporting & Monitoring

NetVision

NVMonitor

NVMonitor provides an audit trail of activity as well as real-time alerts and immediate event remediation. Monitoring changes and events is an essential part of maintaining security and a holistic audit response.

NVAssess

NVAssess enables scheduled, automated reporting based on flexible query capabilities telling you exactly what you need to know. Remediation tasks can be run on query results to automate essential processes.

Access Rights Inspector

Access Rights Inspector provides a flexible reporting interface for calculating effective rights on Windows & Active Directory. Permissions are based on security groups, inherited permissions, object ownership, and more.

SIMON

SIMON, NetVision's managed service offering, simplifies deployment and system ownership. In addition to system maintenance, SIMON provides policy & report guidance and expertise to ensure relevant results.

Simple. *And that's what it's all about.*

Whether you're responding to specific audit demands, or just trying to keep track of changes, you need a solution that makes life easier and reduces cost. **NetVision can help.**

Complete Audit of:

- ✓ User Accounts & Groups
- ✓ Access Rights
- ✓ Administrative Changes
- ✓ User Activity

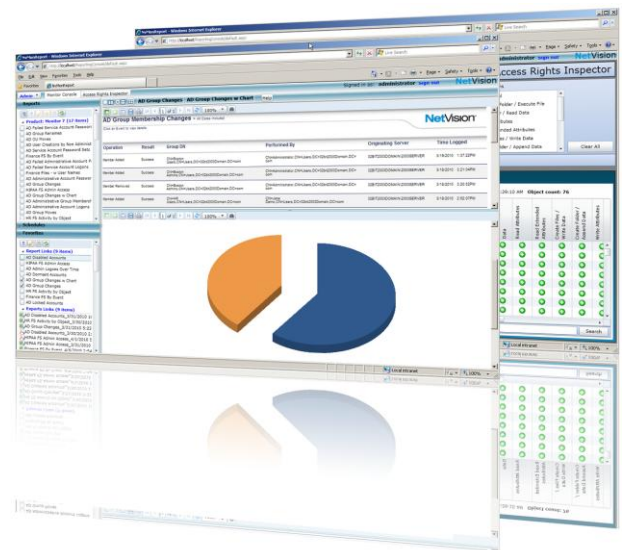

NetVision provides complete coverage of core network systems including network directories (where user accounts and security groups are stored) and file systems (where sensitive information may be distributed across numerous servers).

Preventative, Detective & Reactive

NetVision addresses all three types of security controls to prevent security breaches, detect when events occur, and react in real-time with alerts and remediation.

Real ROI

The bottom line is automated reporting, real-time business owner alerts, quick easy reports, and reduced cost of audit, and all with near zero effort.
