

NVAssess

Automated Reporting

NetVision

Key Benefits

Relevant

Flexible query builder enables relevant, focused results.

Comprehensive

Unlimited ability to gather critical access information.

Automated

Eliminates manual processes and reduces cost.

Simple

Easy to use interfaces require no in-depth training or prerequisite knowledge.

Flexible Reporting

Separation of data and display enables limitless report customizations with scheduled exports and emailing of reports.

Flexible Response

Query results may be processed for automation of key account and group processing tasks.

Platforms

Microsoft Active Directory

Microsoft Windows

Microsoft Exchange

Novell eDirectory

Novell Open Enterprise Server (SUSE Linux)

Novell NetWare

Powerful. *Reduced cost & effort.*

Understanding current User Accounts, Attributes, Security Group memberships and File System Permissions is a key aspect of security audit response. NetVision's NVAssess enables you to report on any combination of object and attribute within the network directory and a wide variety of file system information.

A few questions addressed by NVAssess include:

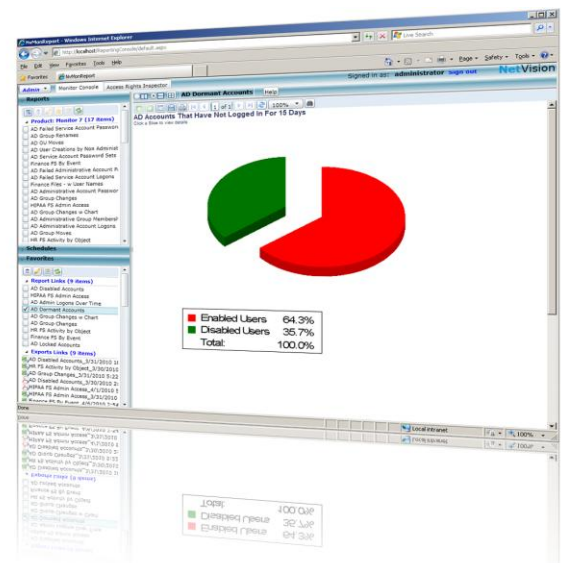

- What Accounts Exist?
- Which Accounts are Enabled or Disabled?
- Which Accounts are Dormant or Unused?
- Which Accounts have Specific Attributes (job titles, departments, etc.)?
- What Security Groups Exist?
- Which Accounts are Members of Which Groups?
- What Permissions are set on Files?

NVAssess provides a powerful platform for gathering access rights information across core network systems. Best-practice templates are included and a number of reports are pre-configured for a quick start.

Total Coverage

NVAssess enables comprehensive access rights reporting with automated answers to the critical question:

Who Has Access to What?
